America's Most Challenging High Schools ranks schools through an index formula that's a simple ratio: the number of Advanced Placement, International Baccalaureate and Advanced International Certificate of Education tests given at a school each year, divided by the number of seniors who graduated that year. A ratio of 1.000 means the school had as many tests as graduates.

The index score is the number of college-level tests given at a school in 2015 divided by the number of graduates that year. Also noted are the percentage of students who come from families that qualify for-lunch subsidies (Sub. Lunch) and the percentage of graduates who passed one college-level test during their high school career, called equity and excellence (E&E).
