

**BIZARRO** by Dan Piraro

John was addicted to placebos until I sent him to a homeless shelter for a week & told him it was a rehab clinic.

## Randy Bailey -- EVHS Mathematics & Statistics

Hello, Scholars and Visitors! A bit o' miscellaneous trivia:

I'm from beautiful Lansing (the picture above shows the whole town!), near [Austin](#), MN: [Spamtown](#), USA. I hold BS and MEd degrees in [mathematics education](#) from the [University of Minnesota](#), and spent '03-04 as the Visiting Master Teacher in [math](#) & [statistics](#) at [St. Olaf College](#). I'm a [private pilot](#); haven't [crashed](#) yet! [Interested in flying?](#) Some sweet Eastview things: [Debate](#) , [NHS](#) , [Math Team](#) , [Mr. Haugh](#) , our nationally ranked [football chain gang](#)! Two of the world's great shrines (and my favorite places!) are [here](#) and [here](#).

**NOTE: As of fall 2011, I will be on leave from EVHS & my school email may not work. Try the phone book, or my home email: randy dot bailey at frontiernet dot net**

[2010 AP Stats Exam results are back!](#)

# Bailey's Top Two Tips for beginning (and other) APStat teachers

This document, and all others referenced herein, are available electronically at my website <http://www.district196.org/evhs/People/baileycweb/> ....or just google "Bailey EVHS"

**1)\*\*\*** Join, monitor, and submit to the APStat "electronic discussion group" \*\*\*  
<http://apcentral.collegeboard.com/apc/public/homepage/7173.html>

**2a) Check the APS FAQ list (especially the "General Info for New Teachers"!)**  
<http://www.mrderksen.com/faq.htm>

**2b) Stuck? Check the APStat Discussion Group Archives**  
(common questions – and expert answers from **ACTUAL GURUS** -- are here)  
<http://mathforum.org/kb/forum.jspa?forumID=67>

**2c) Use the APStat resources at AP Central:**  
<http://apcentral.collegeboard.com/stats>

**2d) Stuck on how to teach/understand \_\_\_\_\_ ?**  
*Check the archives. Check FAQ. Use an activity or lab.*

**2e) Open a professional account at AP Central and get rolling on your audit.**  
[http://apcentral.collegeboard.com/apc/public/courses/teachers\\_corner/46361.html](http://apcentral.collegeboard.com/apc/public/courses/teachers_corner/46361.html)  
LOADS of audit resources, including sample audits for all major books:  
[http://web.mac.com/statsmonkey/APStats\\_at\\_LSHS/AP\\_Audit.html](http://web.mac.com/statsmonkey/APStats_at_LSHS/AP_Audit.html)

**2e) Use the variety of resources available!**  
*Online resources your book provides, esp. quizzes & applets, applets, applets.  
Newspapers/magazines have examples every day that you can use.  
Teachers' websites: Jason's Statsmonkey, etc. Great list of these is available at FAQ!!*

**2f) Make (i.e., copy / heist / steal) a schedule -- and stick to it.**  
*Schedules available with your book's resources, on FAQ, Statsmonkey, etc.  
The kids WILL seem to "need just one more day...." for most every topic!  
Trust that many stat ideas WILL 'come together' later in the course.*

**2g) Success on the AP Exam is our shared goal – from Day 1.**  
**Hand out the APS formulas & tables on day 1. Open use on ALL tests, HW, etc.**  
**Use old FRQ's for homework, on exams, for test prep, everywhere, from Day 1.**  
*ALL old FRQ's are available from AP Central, and an index of year/question vs. topic is available at sites below! This is pure sweetness!*  
[http://apcentral.collegeboard.com/apc/members/courses/teachers\\_corner/47425.html](http://apcentral.collegeboard.com/apc/members/courses/teachers_corner/47425.html)  
[http://web.mac.com/mrmathman/MrMathMan/Downloads\\_files/FR%20correlation.doc](http://web.mac.com/mrmathman/MrMathMan/Downloads_files/FR%20correlation.doc)  
*Let kids 'grade' their own FRQ's via associated Scoring Guide. Mmmm good!*

**2h) Keep taking workshops. Keep taking workshops. Keep taking workshops.**

**2i) it WILL be better in year (X+1) than it was in year X. (by mathematical induction)**

**AP Statistics IS much harder to teach well than any m \_ \_ h course.**  
**...AND IT IS MUCH MORE REWARDING.**

Send me a note - any time, any reason - at [randy.bailey@frontiernet.net](mailto:randy.bailey@frontiernet.net)  
<http://www.district196.org/evhs/People/baileycweb/>

## General Information for New Teachers

1. Why divide by  $n-1$  in the standard deviation formula?
2. How do I explain R-squared?
3. Do I have to teach log and power re-expressions?
4. What's the difference between confounding and lurking variables?
5. What's the difference between independence and mutually exclusive?
6. How much probability do I need to teach?
7. What's the deal with adding variances?  $\text{Var}(2X) = ?? \text{Var}(X) + \text{Var}(X)$
8. I'm running out time and what can I do (especially with inference for slope)?
9. How much work do students need to show on the exam?
10. Which textbook should I pick?
11. What's a good review book?
12. Why do I use the pooled-p for a 2-proportion z-test?
13. How do you solve Sally and Betty? 2002 #39 MC?
14. How do I promote my class?

## Resources

**\*\* Where can I find good Internet applets?**

**\*\* Where can I find quality activities for my class?**

What journals and publications make for valuable reading?

What books and texts will I find valuable as a resource to keep handy on my bookshelf?

**\*\* Where can I find loaded dice?**

Where can I find web sites about AP Statistics?

Which video series would be valuable for AP Statistics?

**\*\* Where can I get information about AP Statistics workshops?**

## The Exam

**\*\* What content are students responsible for on the exam?**

What tables and formulas are provided for student use during the exam?

How do other teachers review for the exam?

Are there any good review books available?

**What do experienced teachers recommend to do AFTER the exam?**

**Where can I obtain copies of previous exams and rubrics?**

**When will ETS release more multiple-choice questions?**

Can I get information from the faculty consultants about their past Reading experiences (so I can better prepare my students for next year's exam)?

What is the College Board policy on calculator use during the exam?

What can I tell my students to help them prepare for answering free response questions that require the use of a calculator?

Google "Bailey EVHS" or go directly to <http://www.district196.org/evhs/People/baileycweb/> and then click "AP Statistics".....

"I keep saying that the sexy job in the next 10 years will be statisticians. And I'm not kidding." -- Hal Varian, Chief Economist at Google

## **ADVANCED PLACEMENT STATISTICS**

**“Statistical thinking will one day be as necessary for effective citizenship as the ability to read and write.” H. G. Wells (1866-1946)**

### ***I. COURSE OBJECTIVES—what successes are we targeting?***

- demonstrated mastery of the AP Stats curriculum as determined by the College Board.
  - use the tools of statistics to develop good problem-solving, critical thinking, and citizenship skills.
  - prepare for further success in college-level mathematics
  - keep college major and subsequent career options open.
- e. GET COLLEGE CREDIT FROM THE AP STATS EXAM: 12:00 noon TUESDAY, MAY 16<sup>th</sup>, 2012.**

### ***II. EXPECTATIONS—what qualities will it take to be successful?***

- your best effort and greatest responsibility.
- respect for all those in the room.
- bring all proper and no improper materials to class.
- compliance with EVHS absence and tardy policies.
- knowledge of, respect for, and compliance with the EVHS academic honesty and integrity policy.

### ***III. SUPPLIES—what items do I need to be successful?***

- 3-ring binder, paper, pencil
- TI-83/84/+ graphing calculator and manual
- awesome positive attitude
- book cover

### ***IV. ASSIGNMENTS/HOMEWORK—what should I do to be successful?***

- Read each section before we cover it in class.
- Have all work completed to the best of your ability before class begins.
- Avoid late work. There is no guarantee of any credit. Don't get, be, or stay behind.
- Regular attendance is key to math success. There are two kinds of absences—those you don't know are coming and those you do. If you miss class for an unforeseen reason (i.e. sickness) your responsibilities are 1) connect with classmate(s) and get copies of any notes, tutoring, etc.; 2) stop by and see me before school when you return to pick up materials and schedule any makeup; 3) complete all makeup within the “2-for-1” policy set by EVHS. If you do know about an upcoming absence (i.e. field trip, activity practice, vacation, etc.) then your responsibilities are 1) notify me well ahead of the absence; 2) pick up any needed materials as soon as they're available; 3) arrange for classmate(s) to feed you copies of notes, handouts, tutor you, etc.; 4) possibly complete the work prior to missing class; 5) be caught up and in step with the class when you return. The “2-for-1” makeup rule does not apply to pre-planned absences. Every opportunity comes with a responsibility.
- Don't let outside commitments get in the way of classroom success.
- Be responsible about homework without having it 'checked' daily. You're in a college-equivalent AP class.

### ***V. TESTS & QUIZZES—how will my success be measured and evaluated?***

- Tests will be announced. Quizzes may or may not be announced.
- Time will usually be scheduled for review before chapter tests.
- If you miss a test, quiz, or review day, you will generally make up the test/quiz the day you return. If you are gone, it is your responsibility to stop by before school the next day to make a plan.

### ***VI. GRADES—how will my success be reported?***

- Our shared goal is DEMONSTRATED MASTERY OF THE MATERIAL on the way toward acing the AP exam. Percentage weights used for computerized grading during the quarter: 20% Assignments/Homework; 80% Tests, Quizzes, Projects; possible Cumulative Exam(s) covering the qtr./semester's material. I also reserve the right to use my own non-computerized professional judgment of your mastery in assigning your transcript grade.
- Approximate cutoffs: 93%+=A, 90%+=A-, 87%+=B+, 83%+=B, 80%+=B-, 77%+=C+, 73%+=C, 70%+=C-, under 70% = my professional judgement.
- Pass/No Credit Option: 70%+=Pass, <70%=No Credit. Confirm req's w/Bailey before choosing this option.

### ***VII. HELP !! —How can I increase my opportunity for success?***

Options include study groups during study hall & outside school w/classmates, extra work before/after school, peer tutors, Homework Hotlines, and other math teachers. In AP Statistics, another great resource is the variety of online resources available. Our #1 shared goal is mastery of the course material on the way toward acing the AP exam, and I am willing to help out a responsible, hard-working student in most any way I can. If you have suggestions to improve the class, please see me! Be sure and communicate your needs and concerns.

The first part of my schedule:

Cls	Qtr	Day	Date	ch.sec	Things to help you learn: practice probs, resources, etc.	Done?
1	1	T	5-Sep	1	Play Greed game. # DAY ONE:

## I. Descriptive Statistics

$$\bar{x} = \frac{\sum x_i}{n}$$

$$s_x = \sqrt{\frac{1}{n-1} \sum (x_i - \bar{x})^2}$$

$$s_p = \sqrt{\frac{(n_1-1)s_1^2 + (n_2-1)s_2^2}{(n_1-1) + (n_2-1)}}$$

$$\hat{y} = b_0 + b_1x$$

$$b_1 = \frac{\sum (x_i - \bar{x})(y_i - \bar{y})}{\sum (x_i - \bar{x})^2}$$

$$b_0 = \bar{y} - b_1\bar{x}$$

$$r = \frac{1}{n-1} \sum \left( \frac{x_i - \bar{x}}{s_x} \right) \left( \frac{y_i - \bar{y}}{s_y} \right)$$

$$b_1 = r \frac{s_y}{s_x}$$

$$s_{b_1} = \frac{\sqrt{\sum (y_i - \hat{y}_i)^2}}{\sqrt{\sum (x_i - \bar{x})^2}}$$

## II. Probability

$$P(A \cup B) = P(A) + P(B) - P(A \cap B)$$

$$P(A|B) = \frac{P(A \cap B)}{P(B)}$$

$$E(X) = \mu_x = \sum x_i p_i$$

$$\text{Var}(X) = \sigma_x^2 = \sum (x_i - \mu_x)^2 p_i$$

If  $X$  has a binomial distribution with parameters  $n$  and  $p$ , then:

$$P(X = k) = \binom{n}{k} p^k (1-p)^{n-k}$$

$$\mu_x = np$$

$$\sigma_x = \sqrt{np(1-p)}$$

$$\mu_p = p$$

$$\sigma_p = \sqrt{\frac{p(1-p)}{n}}$$

If  $\bar{x}$  is the mean of a random sample of size  $n$  from an infinite population with mean  $\mu$  and standard deviation  $\sigma$ , then:

$$\mu_{\bar{x}} = \mu$$

$$\sigma_{\bar{x}} = \frac{\sigma}{\sqrt{n}}$$

## III. Inferential Statistics

Standardized test statistic:  $\frac{\text{statistic} - \text{parameter}}{\text{standard deviation of statistic}}$

Confidence interval:  $\text{statistic} \pm (\text{critical value}) \cdot (\text{standard deviation of statistic})$

## Single-Sample

Sample Mean	$\frac{\sigma}{\sqrt{n}}$
Sample Proportion	$\sqrt{\frac{p(1-p)}{n}}$

## Two-Sample

Difference of sample means	$\sqrt{\frac{\sigma_1^2}{n_1} + \frac{\sigma_2^2}{n_2}}$ <p>Special case when <math>\sigma_1 = \sigma_2</math></p> $\sigma \sqrt{\frac{1}{n_1} + \frac{1}{n_2}}$
Difference of sample proportions	$\sqrt{\frac{p_1(1-p_1)}{n_1} + \frac{p_2(1-p_2)}{n_2}}$ <p>Special case when <math>p_1 = p_2</math></p> $\sqrt{p(1-p)} \sqrt{\frac{1}{n_1} + \frac{1}{n_2}}$

$$\text{Chi-square test statistic} = \sum \frac{(\text{observed} - \text{expected})^2}{\text{expected}}$$

# Survey: Parents clueless on booze, drugs at teen parties

By Donna Leinwand  
USA TODAY

Parents' images of the typical teen party as generally drug- and alcohol-free are drastically out of whack with reality, according to a survey out today from the National Center on Addiction and Substance Abuse at Columbia University.

The 11th annual survey of teenagers and parents finds that half of teens who attend parties say alcohol, drugs or both are available, but 80% of parents believe their teens attend substance-free parties.

"They smell no pot, they see no drinking and they hear nothing of the drugs that their kids are using," center chairman Joseph Califano says. "I think they really have no sense of how awash their teens' world is in alcohol and drugs. There is a terrible disconnect."

Parental supervision at parties deters some drug use but does not guarantee kids won't sneak alcohol and drugs, the survey shows. Although 99% of parents say they would not be willing to serve alcohol at their teen's party, 28% of teens say they have been at supervised parties where alcohol is available.

Carol Falkowski, director of research communications at the Hazelden Foundation, an addiction-treatment facility in Center City, Minn., speaks to parent groups across the country and finds that their own teen experiences color their image of today's parties.

"It's much different today. Parents need to catch up," Falkowski says. "We live in a world where eight out of 10 kids are going to drink alcohol before they get out of high school and 50% will have tried marijuana."

The move from middle school to high school is a critical point where the risk of alcohol and drug abuse rises dramatically, according to the survey. It finds 14-year-olds are four times more likely to be offered

## Out of sync

Parents and teens have different perceptions of what goes on at parties:

■ What parents say  
■ What teenagers say

Neither alcohol nor marijuana is available at teen parties.

80%

Alcohol, drugs or both are available at teen parties.

50%

Parents normally present at teen parties at their home.

98%

Parents rarely or never at teen parties.

33%

Source: Telephone survey for the National Center on Addiction and Substance Abuse at Columbia University, conducted March 9 to April 30 of 1,297 12- to 17-year-olds, and 562 parents. Margins of error: ±3 percentage points for teens, ±4 percentage points for parents.

By Robert W. Ahrens, USA TODAY

prescription drugs and three times more likely to be offered Ecstasy or marijuana than 13-year-olds.

The older teens also are far more likely to encounter alcohol and drugs at parties even when parents are supervising, the survey says.

"The parents may be home, but they are rarely walking into the room where their kids are having a party," Califano says.

Tessa Vining, who runs Phoenix House's IMPACT, a drug rehabilitation program in New York City, says parents often suspect their children are experimenting with drugs, but don't realize how much or how often.

"Kids will party in a house if the parents go out to dinner for three hours," she says.

Falkowski recommends talking regularly to kids: "Be nosy and stay engaged."

# Se [redacted] active teens wish they had waited

## HILA

ASSOCIATED PRESS

NEW YORK

A majority of [redacted] actively active teen-agers wish they had waited until they were older, according to a national poll.

Although very few high school students said they felt pressure from their peers, partners or the media to have [redacted] 54 percent of those who have had [redacted] said they should have waited, the Roper poll found.

The teen-agers gave, on average, 17 as the "best age" to [redacted] two years older than those polled reported that they began.

Results were to be broadcast today on "Ronda," a nationally syndicated talk show that commissioned the poll in cooperation with the Sexuality Information and Education Council of the United States, a New York-based inter-

The report "Teens Talk About [redacted]" is available for \$12 from SIECUS Publications, 130 W. 42nd St. Suite 2500, New York, N.Y. 10036.

Telephone interviews with 503 students in grades 9 through 12 were conducted last month by Roper Starch Worldwide, which said results have a margin of sampling error of less than 5 percentage points.

Teen-agers' [redacted] attitudes and experiences are of intense interest to AIDS prevention specialists, who often complain that their efforts to get government studies are blocked by religious conservatives.

The Roper questionnaire includes the sort of frank questions that have caused uproars in school-based surveys.

AIDS and teen-age pregnancy rated as very high concerns in the survey, and 75 percent of those having sex said they were using control always or most of the time. Fourteen percent said they did not use a [redacted] all or most of the time to prevent AIDS or other sexually transmitted diseases.

The number who said they had [redacted] 36 percent, was much lower than the 57 percent in a 1990 survey by the U.S. Centers for Disease Control. But it was not clear whether

that was a real drop [redacted] fewer teen-agers may be willing to report [redacted] when called at home, compared to the federal survey's use of a written questionnaire in a sealed envelope at school.

But when the p [redacted] asked about deep kissing, petting and other [redacted] al behavior, only 8 percent of the young [redacted] people reported no sexual involvement.

Fully 72 percent of those who reported [redacted] sex said they [redacted] it in the homes of their parents or their partner's parents. Six in 10 believe their parents know about their sexual behavior, the poll found.

Debra Haffner, SIECUS executive director, said the [redacted] sexuality information clearinghouse planned to distribute results to promote more sex education in schools and in the home.

"One of the things this poll suggests is how confused young people are in America about sexuality," she said.

"I think there's a lot of contradiction between their attitudes and what they're doing, which I think is not something we as adults should feel good about," Haffner said.

CONTINUED FROM

The Tuesday was another big week for Hilary, who edged on Thursday almost \$100,000 in chimes, primas, Casino. She also raptury, and \$ repayment of took out last

Hilary admitted she asked [redacted] "When I was going to be a lion, as a lion him," she said.

Conceding day, board's suggestion herself for the revision.

# Survey: Drug, alcohol use on decline in District 196

by Andrew Miller  
THISWEEK NEWSPAPERS

There's good news for students and parents in School District 196.

Smoking, drinking and drug use are on the decline in the district, according to the 7 Minnesota Student Sur-

The survey was given to sixth-, ninth- and 12th-graders and measured substance use, sexual behavior, perceptions of gang activity and other factors affecting student life. Students taking the survey were guaranteed anonymity.

On the whole, the district has seen positive change since the last year the survey was administered.

"The results are down where they should be and up where they should be," said Andrew Parr, the district's director of secondary education, who delivered an overview of the survey results to the School Board on Feb. 11.

Survey results include:

• **Alcohol use** - The number of students who reported using alcohol in the past year decreased by about 3 percent in all three grade levels.

Six percent of sixth-graders, 36 percent of ninth-graders and about 60 percent of 12th-graders said they'd used alcohol in the past year.

• **Marijuana use:** Marijuana use in the past year declined for district sixth- and 12th-graders.

One percent of sixth-graders and a third of all 12th-graders reported marijuana use in the past year. Marijuana use for ninth-graders remained steady at 13 percent.

• **Tobacco use:** The percentage of heavy smokers remained nearly level between 2004 and 2007.

About 5 percent of 12th-graders and about 1 percent of both sixth- and ninth-

graders reported smoking half a pack a day or more - but all three grade levels saw declines in social smoking, or "tobacco use in the past 30 days."

About 30 percent of 12th-graders reported tobacco use in the past 30 days, compared with 11.5 percent of ninth-graders and 1 percent of sixth-graders.

• **Sexual activity:** Sexual activity jumped from 42 to 46 percent for 12th-grade males between 2004 and 2007, while sexual activity for 12th-grade females remained steady at 40 percent.

The number of ninth-grade males reporting sexual activity also saw a slight increase, jumping from 19 to 21 percent, while ninth-grade females reporting sexual activity dropped from 15 to 13 percent.

• **Gang activity:** Students were asked if gangs are a problem at their schools. About a fifth of sixth-graders thought gangs are a problem, a slight increase from 2004. About a fifth of all ninth-graders and less than 10 percent of 12th-graders perceived gangs as a problem at school.

Survey data will be used to refocus drug and alcohol prevention efforts, Parr said. Specifically, the district will look at ways that curriculum can be modified.

Information from past surveys have resulted in "significant changes" to the district's Developmental Psychology program, Parr said.

The survey is given throughout Minnesota every three years. It was first administered statewide in 1989. District participation is mandatory to be eligible for Federal Safe and Drug-Free Schools funding.

ONE BIG HAPPY RICK DETORIE

©2006 Creators Syndicate, Inc. *One Big Happy* [www.onebighappy.com](http://www.onebighappy.com)

**Close to Home: By John McPherson**

Sensitive to the feelings of those kids who routinely got picked last for teams, gym coach Ray Mulnak devised a more humane player selection method.

# M&M / Skittles Candy Lab: z-interval for a mean & z-test of a mean

(easily adaptable to t-procedures)

[Lab Sheet](#) -- what I give the kids. it has a front & a back side.

[Data Spreadsheet](#) - to check answers etc.. Really neat if you can project it on board.

[Template](#) - an ALL-PURPOSE template for Confidence Intervals & Significance Tests!

[Conclusions](#) -- what their writeup might look like

Pictures of Scholars doing this lab: [Picture1](#) [Picture2](#) [Picture3](#)

## Tips/hints for lab

- on lab days, my kids are randomly assigned to a team. Every group of 4 seats has a name: Alpha, Bravo, Charlie, etc. Kids pick a slip of paper from a pile on the way in and go sit at the table with the name they picked. First thing: Tell everyone on your team your name. Second thing: say something nice about everyone on your team. OK, now start the lab!
- have at least 2 (preferably 4) balances for the kids to weigh things.
- remind them repeatedly that we have **TWO DISTINCT** tasks: 1) write a CI for the mean number of items in a bag and 2) do a sig test on the mfg's claimed mean net weight.
- give each group paper plate(s), napkins, cups, etc.; see above pictures of kids doing lab (more pix avail if wanted)
- remind them that for the weight test we care about NET weights (candy only!) not gross weights.
- give each team 1 bag of MM, 1 bag of skittles. But if you want to cut things down (perfectly OK) , just do ONE candy.
- esp. for beginning statisticians: do ALL work on the Template sheet. Get used to a good format for writing CI's and Sig Tests.
- put a copy of the data tally sheet on the overhead projector; have teams come up & fill in data as they get it.
- If you've got Excel, load their numbers into the Data Spreadsheet in the appropriate places for a quick automatic check on their work. Even better if you can project this spreadsheet on the board for all the cherubs to see.
- take pictures. Save for next year. Print a few & post in classroom. Use for recruiting next year.
- I've got an MM PROPORTIONS lab that I'll be posting soon.

Please contact me with any other q's. -- [randy.bailey@district196.org](mailto:randy.bailey@district196.org)

From a 2010 course evaluation:

*"I did the homework and everything, but what really tied things together for me was the labs we did. Those are the days I learned the most about statistics"*

## Dear News Media,

When reporting poll results, please keep in mind the following suggestions:

1. If two poll numbers differ by less than the margin of error, it's not a news story.

2. Scientific facts are not determined by public opinion polls.

3. A poll taken of your viewers/internet users is not a scientific poll.

4. What if all polls included the option "Don't care"?

Signed,

-Someone who took a basic statistics course.

AP Statistics CAPSTONE RESEARCH  
& Practical Final Exam:

**BE A STATISTICIAN!**

**Executive Summary:**

- 1) Identify & refine a researchable question or testable hypothesis with measurable variables
- 2) Design a proper experiment or observational study to generate appropriate data
- 3) Carry out your experiment or study
- 4) Do a full and proper analysis of resulting data in order to answer your question/hypothesis.
- 5) Choose & execute a proper method of presenting 1) through 4) to your peers....AND the Executives in Upper Management.

The emphasis is on the application of proper study design and data analysis techniques, not so much on gathering a huge data set and reaching an authoritative conclusion – but that’s nice, too!

---

**OK, further details:**

- 1) Identify & refine a researchable question or testable hypothesis with measurable variables
  - your question should be...worthwhile! interesting! valuable! do-able!
  -
- 2) Design a proper experiment or observational study to gather appropriate data
  - surveys and/or use of existing data are VERY discouraged. YOU generate ORIGINAL data.
  - if you can’t get the data to analyze, a great idea...isn’t!
  - if your research involves people, be prepared for attendant ‘issues’!
  - if you do ANYTHING to or with human subjects, it must be approved by Upper Management.
- 3) Carry out your experiment or study
  - do you have the time? the equipment? the resources? the funding? the subjects?
  - **Take PICTURES! Document your work!!**
  -
- 4) Do a full and proper analysis of resulting data in order to answer your question/hypothesis.
  - PANIC? PHANTOMS? Graphs! Charts!
  - conclusion(s)? items/ideas for further research that were suggested by your results?
  -
- 5) Choose & execute a proper method of presenting 1) through 4) to the Executives in Upper Management.
  - consider how you might communicate the results...*to expert and/or lay audiences*.
  - powerpoint, PICTURES, video, skit, poster, booklet, packet, report, video, movie, slideshow, overheads, handouts, \_\_\_\_\_?, \_\_\_\_\_?

**Timeline:**

- May \_\_\_: Intro to Capstone project. Take a look at some previous Capstones. Generate research question.
- May \_\_\_: Completed form describing the research question, hypotheses, design, & data analysis plan. Refine ALL.
- May \_\_\_: Refined/final description of research question, experiment/study design, and data analysis plan
- May \_\_\_: Gather data. Raw data from your experiment/study should be IN.
- May \_\_\_: All data should be IN and you’re doing analysis; starting to plan/generate your presentation.
- May \_\_\_: Random assignment to a presentation slot on the calendar. (Then you can trade if you want!)
- May \_\_\_ - \_\_\_: Presentations to the Class and Executive(s) in Upper Management. Balloting/grading.
-

## Greetings, 2011-2012 EVHS A.P. Statistician!

We're Ken Mulsoff and Judy Hoffman, EVHS teachers who will be leading the AP Statistics course in 2011-2012. We suspect that the academic challenges of next fall may not be at the forefront of your thoughts right now, but perhaps things will change over the summer! We write to offer you a few ways to be a step ahead with a pre-warmed brain when AP Statistics gets rolling in September.

**First**, poke around under "AP Statistics" at the Eastview Stats site: <http://www.district196.org/evhs/People/mulsoffweb/>  
You'll find tips, hints, etc., and learn about the basics of AP Stats at Eastview.

**Second**, keep your eyes & ears open for the stats you're exposed to every day.....

The weather broadcaster will tell you today's average high temperature, and will often compare today's high with the average, but how do they really compare? Are you told how unusual today is compared to the average? How would you decide if a day is unusually hot or cool? How many degrees above the average make a day really unusual? What information could be given to help you make this decision?

Medical studies are often in the news. Do certain foods/drinks really extend (or shorten!) human life? How much does smoking really harm you? Are the people who volunteer for medical studies just like the rest of folks? Should I spend money on vitamins?

Elections are coming! Every good poll reports a margin of error, with a specified confidence level. What the heck is that truly measuring, what does it mean, and how is it calculated?

**Third**, there are many good books that deal with deep statistical ideas without getting too technical. Consider picking up one of these and giving it a read before school starts. (stars indicate favorites and/or an especially high recommendation)

\*\* **Outliers**, by Malcolm Gladwell. Little, Brown, & Co 2008

\*\* **Innumeracy**, by John Allen Paulos. Hill and Wang

\*\* **Freakonomics: A Rogue Economist Explores the Hidden Side of Everything**, by Levitt & Dubner, 2005.

\*\* **A Mathematician Reads the Newspaper**, by J. A. Paulos. Basic Books, 1995.

\*\* **Moneyball: The Art of Winning an Unfair Game**, by M. Lewis. Norton, 2003

(tells how the Oakland A's revamped their baseball team using basic stats)

\* **The Lady Tasting Tea**, by D. Salsburg. Owl Books, 2001

\* **200% of Nothing**, by A. K. Dewdney. John Wiley and Sons, 1993.

**Bringing Down the House: How Six Students Took Vegas for Millions**, by Ben Mezrich

(Breaking Vegas & "21" movie are based on this book). Free Press

**Foiled by Randomness: The Hidden Role of Chance in Life and in the Markets**, by N. Taleb. Thomson, 2004

**The Black Swan: The Impact of the Highly Improbable**, by N. Taleb. Thomson, 2007

**Tainted Truth: The Manipulation of Fact In America**, by C. Crossen

**The Ghost Map: The Story of London's Most Terrifying Epidemic—and How**

It Changed Science, Cities, and the Modern World, by S. Johnson

**The Tipping Point: How Little Things Can Make a Big Difference**, by M. Gladwell, Little, Brown & Co., 2002

**Fourth**, as you complete THIS academic year, make sure you 'finish strong' and are fully prepared for the AP Statistics opportunity. As described in the materials available when you registered, you must be a self-motivated student with a very strong Algebra II background -- generally 'A' grades, possibly 'B' -- and, even more important, very strong scholarship and attendance habits. If you fit this description, super! If not, you might want to reconsider your course selection. Contact one of us (or your guidance counselor) with any questions.

So...those were a few ideas to keep (or get!) your stat-brain rolling. Watch out -- if you're not careful, you might notice stats around you all the time. We can't wait to see you all in fall. In the meantime, we hope your summer is statistically significantly great. ( $p$ -value  $< 0.05$ )

If you have any questions about anything, feel free to send a note.

Hi! I'm the  
Stats Fairy.

Ken Mulsoff & Judy Hoffman ( [kenneth.mulsoff@district196.org](mailto:kenneth.mulsoff@district196.org) & [judy.hoffman@district196.org](mailto:judy.hoffman@district196.org) )  
EVHS Math/Stats/Computer Science Department
