## PHYSICAL & CHEMICAL CHANGES

	Water Evaporating	$KI + H_2O_2$	Salt Dissolving	Sugar turning black when heated	Baking soda fizzing with vinegar	Ice melting	Paper burning	Mg + HCl
1. Has a new chemical been formed?								
2. Was there a color change?								
3. Was the change easily reversible?								
4. Was heat given off?								
5. Was heat required for the change?								
6. Can the original chemical still be used?								
7. Were any bubbles formed?
